

## **Environmental Policy**

Bridgeport Energy is committed to developing resources in an environmentally responsible manner and shall conduct all activities in a manner consistent with the principles of Ecologically Sustainable Development.

Activities shall be planned and implemented in a sustainable way to ensure impacts to the environment are either avoided or kept to an acceptable level.

To meet these commitments, the Company and its contractors shall strive to:

- Adopt best practice management strategies and implement continual improvement programs;
- Manage environmental matters as a critical business activity;
- Comply with applicable environmental laws and regulations;
- Delay or stop activities where effective environmental mitigation controls are not in place to manage identified hazards;
- Apply a systematic approach to reduce impacts to the biological, physical and social environments and ensure continuous improvement in environmental performance;
- Where possible to reduce energy use, emissions, waste and discharges;
- Require contractors to manage the environment in line with this policy;
- Communicate openly with our employees, contractors, Government and the wider community regarding environmental matters;
- Set targets and regularly monitor, audit and report performance against those targets; and
- Where appropriate provide support to environmental research, education and training to promote an awareness ethic within Bridgeport Energy, its contractors and the wider community.

The implementation and effectiveness of this environmental policy is the responsibility of all Bridgeport Energy employees and shall be reviewed annually by Bridgeport Energy management. The Executive Directors of Bridgeport Energy are accountable to the Board of Directors for ensuring this environmental policy is implemented. This policy shall be updated every two years.
